

The new Panther High-Low Turnstile

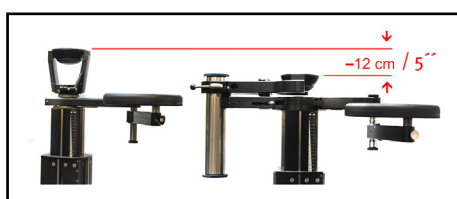

Low position

Position change

Standard position

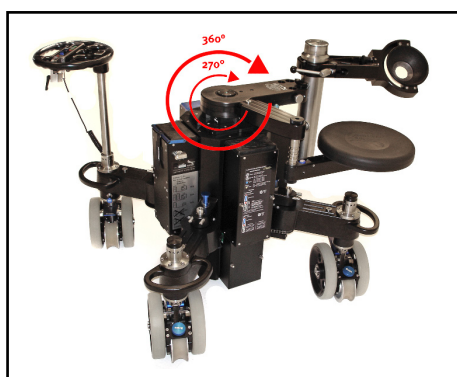

Less mounting height of the camera

The new Panther High-Low Turnstile with its patent pending construction reduces the mounting height of the camera on the dolly by 12 cm / 5".

Furthermore, this turnstile offers the following new features:

- High-Low Rig
- Offset Rig
- Adjustable offset bowl
- Side bowl extension
- Multi Rig 1, with adjustable angles

Two rotating turnstiles

The new Panther High-Low Turnstile allows the camera to change positions from, the central upper position (standard) to a near ground position (low rig) without removing the camera within seconds.

High position

The Low Rig tube can be extended either up or down with parts from our existing accessories program.

The bowl extension can be rotated 360° on demand.

The front element with its bowl can be also rotated and fixed in different angles.

All Panther column dollies, for example the Super Panther III can be modified with the new High-Low Turnstile.

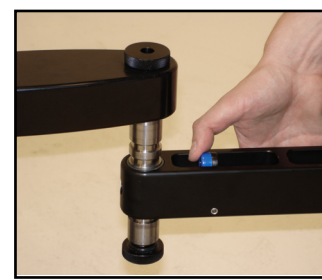

„Old standard mode“
